Rittal DCP – PanelCooling

Panel cooling without compromise

This integrated panel cooling solution was developed by Rittal for optimum and space-saving cooling of operating housings. Heat losses of approx. 250 – 300 W can be dissipated without the need for external add-ons.

The fluid connection on the rear of the panel, also serves to maintain the original protection rating of the housing.

Function principle:

The fan unit with six individual fans provides for optimum air circulation at the cooler and thus for efficient dissipation of the heat losses arising in the housing.

The unit can be connected either to an existing coolant circuit or else to an external recooling system.

Convincing arguments:

- Maximum performance despite minimal space requirements
- No reduction of the original protection category
- No external add-ons necessary

Have we roused your interest? Would you like to know more?

Mr. Tim Kramer would be pleased to answer your calls on **tel. +49 (0)2772 505-2677**.
