

## Data centre for the Estonian central bank

### Easti Pank backs German quality from Rittal

**A data centre meeting European standards was to be established at the Tallinn-based Estonian central bank, Eesti Pank. The bank decided in favour of the offer from Rittal and Lampertz, because the Germans scored best in terms of product quality, consulting and service.**

The Estonian central bank's data centre has been equipped with TS 8 enclosures, the Computer Multi Control Top Concept (CMC-TC) monitoring system, the Power System Module (PSM) power distribution system, as well as a wide range of accessories. The data centre is meanwhile in service.

Rittal was chosen because the German company's products met European standards. Quality and design were convincing factors when selecting the racks. In addition, the Eesti Pank also singled out as decisive the versatile accessories and the modularity of the system, all allowing flexible installation. The same went for the CMC-TC monitoring system, which can be integrated in the existing security system. Finally, the bank was also greatly impressed by the excellent on-the-spot service – a big plus for Rittal.
