

RimatriX5 in residential area

Parteon implements RimatriX5 in new data center

About Parteon

Parteon is a housing corporation founded on 16 June 2005 through the amalgamation between De Woonmij Zaanstad and Saenwonen. Parteon is a large player in Zaanstad: they offer accommodation to one out of every four Zaankanters, and are the largest party in the urban renovation districts with regard to improvement (demolition) and new development of rental and private properties.

They consider themselves as a partner of Zaanstad. Parteon works for a broad target group and feels particularly responsible for the vulnerable groups in society.

Good housing in a pleasant living environment is their primary care. From their social passion they invest, in collaboration with the municipality, residents and other civil society organisations, in the social climate of neighbourhoods. The wishes of their clients are normative with the development of new products and services. Parteon creates the conditions among which people can improve their domestic and social environment.

Objectives

In former days the primary system of Parteon was externally hosted. It has been Parteon's wish to do this themselves from now on. In addition to that a choice was made for a new ERP-application, namely Navision.

Through the insourcing of these complex applications, ISSYS (a partner company of Rittal Netherlands) was asked to think along in order to set-up and protect this ICT-environment. Consequences of possible fire damage, temperature influences, atmospheric humidity and other damage had to be restricted to a minimum.

On the basis of the new concept of Rittal, RimatriX5, a completely modular computer space was implemented. The air-conditioning, the energy supply, the protection of the servers against physical impact and the remote monitoring of functions have been realised because of this. ISSYS implemented a complete, scalable and efficient system for maximum IT-performance.

Components: Racks, LCP, CMC-TC
