

Customer satisfaction with RimatriX5

Satama Interactive Group uses Liquid Cooling Package

About Satama Interactive

Satama Interactive supports its customers with the development of long-term business contacts with their clients and stakeholders by means of mobile and fixed Internet.

Satama Interactive distinguishes three core competences: Internet consultancy, usability & creation and technology. Satama Interactive is strong in each field, but the teamwork especially determines Satama's strength and the surplus value for its customers. Satama Interactive is a full service Internet agency.

The Dutch branch of Satama Interactive is among the pioneers of the Internet. It was established in 1994 as General Design, and since March 2000 it has carried the name Satama Interactive. Almost 40 specialists work from Amsterdam and the agency is, meanwhile, one of the market leaders for interactive services in the Netherlands. Among their clients are: ABN AMRO, Audi Nederland, INHOLLAND, KPN, Nokia, Planet Internet, Koninklijke Swets & Zeitlinger, and Reed Business Information (Zibb.nl). The Amsterdam branch of Satama is part of the Satama Interactive Group, with the head office in Helsinki.

Objectives

When Satama had the intention of designing anew the existing server space according to traditional methods, Satama came into contact with ISSYS (one of our partner companies in the Netherlands).

Subsequently they looked at alternative design solutions for server spaces. RimatriX5 appeared to perfectly fit the ideas which Satama had in mind; costs and space-saving, easy to protect, modular, and possible to move to another location in a flexible way. In short, the perfect solution.
