

RimatriX5 - high availability in vehicle industry

About VWE bureau voor voertuigdocumentatie en –informatie

VWE bureau voor voertuigdocumentatie en –informatie (bureau for vehicle documentation and information) is an information and advisory centre for the vehicle trade. A clear objective of VWE bureau voor voertuigdocumentatie en-informatie is reliable information supply, advisory services and document supply for the support of the vehicle trade in the broadest sense of the word. VWE strives to offer complete service both by means of national centres, and electronically by means of network services.

For the support of its service VWE has at its disposal a complete RDW (Centre for vehicle technology and information) shadow register and national network coverage: VWE-ExtraNet. VWE acts as a RDW communication and information provider.

Since the establishment in 1975, VWE has developed into an authority in the field of service for the vehicle trade. VWE provides advisory and administrative services. Over the course of years, a strong connection has been forged with government and private bodies, both nationally and internationally, which are involved in this specific branch of industry. Knowledge and experience, plus meticulous working methods make employment of VWE extremely attractive to both large and small players in the market.

Objectives

VWE was searching for a way to categorize the online data and the available infrastructure for its clients in an alternative location. Moreover, there was a 24-7 need for availability and continuity.

To set up the alternative location optimally and to realise this within the time and the budget, ISSYS suggested the RimatriX5 concept.

Finally the modular structure of RimatriX5, the scalability and the rapid implementation of the concept were reasons for VWE to choose ISSYS and RimatriX5.

Components: Rack, LCP
