

Rittal – Case Study

Rittal stainless steel solution used by Schering A clean solution for sophisticated hygienic demands

Allover clean! What sounds like a slogan coming from the detergent industry, is just crucial for special industries that cannot run without highest hygiene. Pharmaceutical manufacturers depend on the highest possible hygienic standards in production proc-

esses. The plant, and, therefore, enclosure systems, need to meet these expectations. In order to ensure hygienic conditions, the pharmaceutical company Schering relies on the Industrial Workstation solution from Rittal. The Rittal range always comprised comprehensive stainless steel solutions for hygiene crucial applications. In order to be able to offer top quality, one part of the product line was optimised to meet highest hygiene and clean room demands. Schering now employs such a special stainless steel solution from Rittal: An Industrial Workstation (IW) is used at Schering in Weimar where pharmaceuticals of high medical value are being pro-

duced. In order to meet the hygienic requirements during the production process, Schering searched for a modern workstation for dust-proofed accommodation of IT components like computers and monitors – coming in a stainless steel "package". Accordingly, Rittal developed a brand-new IW solution consisting of Premium Panel with integrated TFT monitor, a stainless steel shielded worktop including stainless steel keyboard as well as a stainless steel enclosure of type AE.
